

PROPERTY OWNER AFFIDAVIT

"I, Daniel S. Serna, Director of Public Works
(property owner)

acknowledge that the State of Texas may hold me either jointly or severally responsible for the operation, maintenance, and closure and post-closure care of the facility. For a facility where waste will remain after closure, I acknowledge that I have a responsibility to file with the county deed records an affidavit to the public advising that the land will be used for a solid waste facility prior to the time that the facility actually begins operating as a municipal solid waste landfill facility, and to file a final recording upon completion of disposal operations and closure of the landfill units in accordance with Title 30 Texas Administrative Code §330.19, Deed Recordation. I further acknowledge that I or the operator and the State of Texas shall have access to the property during the active life and post-closure care period, if required, after closure for the purpose of inspection and maintenance."

PART II.M: FLOODPLAINS AND WETLANDS STATEMENT

The facility is not located in a floodplain as shown in Figure II.M. Figure II.M(3) shows that there are no 100 year or 500 year flood contours show where the City of Harlingen Transfer Station Facility is located. The City of Harlingen transfer station facility and operations are not located in a 100 year floodway as defined by the Federal Emergency Management Administration (FEMA). According to the FEMA Flood Insurance Rate Map (FIRM) community panel No. 485477 0020 B (dated 08/03/1981), the City of Harlingen transfer station facility property lies in Flood Zone C, which is an area that is determined to be outside the 100- and 500-year floodplains. According to FEMA, this is a moderate to low risk area outside the 1-percent annual chance floodplain.

No wetlands or running or standing water are known to exist at the property. There are no soils, vegetation or hydrologic conditions present on the property that are indicative of a wetlands environment. A review of the Wetlands Inventory Map indicates there are no wetlands within the area defined by the registration boundary.

WETLANDS STATEMENT

I, Edwin C. Centeno-Jimenez, P.E., Senior Engineer, completed a site visit on October 17, 2011 to the above referenced property. During the visit no evidence was found of wetlands characteristics at or near the referenced property. The findings of the review are that the City of Harlingen Transfer Station Facility is not located in a wetlands environment due to the lack of observable characteristics (vegetation, soil and hydrology) used to determine if there exists or there is a possibility of an existing wetland (see figure following this page) and that the property is located at its nearest point approximately 0.12 miles from the Arroyo Colorado.

I also completed a review of government documents available online for wetlands at the above referenced property. Based on a review of the National Wetlands Inventory Map published by the U.S. Fish and Wildlife Service of the U.S. government, the review also found no evidence of wetlands characteristics. The findings of the review are that the City of Harlingen Transfer Station Facility is not located in a wetlands environment (see figure from the National Wetlands Inventory following this page). I, therefore, certify that the site indicated above is in compliance with Wetlands Location restrictions.

Engineer's Name	Edwin Centeno
Name of Engineering Firm	Source Environmental Sciences, Inc.
Street or P.O. Box	4100 Westheimer, Suite 106
